### **DETAILED ACTION**

Applicant's arguments filed February 25, 2002 have been fully considered but they are not persuasive.

Applicant's arguments are:

1. The Examiner has cited no case law or MPEP section to support the position that the recited instructional element is not deemed to hold any patentable weight.
2. In the present case, the instructions are a separate and important element of the claimed kit because they tell how to use the other components of the kit.
3. The courts treat instruction for use, e.g., in the form of printed matter, as a separate element to be accorded patentable weight just like any other recited element; *In re Gulack*, 217 U.S.P.Q 401 (1983) and the *In re Gulack* are the situations where the printed matter is not functionally related to the other elements of the claim there fore the printed matter do not carry patentable weight.
4. The *In re Miller*, 57, C.C.P.A. 809, 418F.2d 1392, 164 U.S.P.Q. (BNA) 46 , the court found that the printed material was functionally related to the other elements of the claim because it told how to use the other elements of the claim.

However, in the instant case, the "Kit" claims are drawn to an old composition which comprises the instructions (intended use). The intended use lacks a function relationship because the instructions (intended use) does not physically or chemically affect the chemical nature within the article of manufacture, and furthermore, the skilled artisan can still use the old composition of the kit for other purposes. Further, *In re Miller*, 164 U.S.P.Q. 46(CCPA 1969) and *In re Gulak*, 217 (CA FC)217 USPQ 401 relate to a mathematical device and to a measuring

cup respectively. In each of these cases, the printed matter is considered a patentable distinction because the function of the device depends upon the printed matter itself which is a part of the substrate; without the printed indicia or numbers, the substrates lose their function. Such is not the case with the instantly claimed articles. The "Kit" claimed articles remain fully functional absent the instructions for use.

It is further noted that the written material in the instructions is not considered to be within the statutory classes and does not carry patentable weight. See MPEP 706.03(a).

Therefore the old composition which are comprised within the claimed "Kit" are unpatentable over the prior art, because they function equally effectively with or without the instructions (intended use) and accordingly no functional relationship exists between the instructions for use and the composition. Thus the claims are addressed as being drawn to a "Kit" comprising an old composition, the instructions of the "Kit" bear no patentable weight with regard to 102 rejections.

In view of the above Office Action of 12/4/2001 is deemed proper and asserted with full force and effect hereby repeated to obviate applicant's claims.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

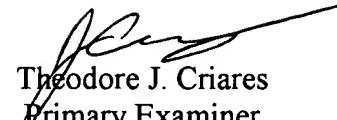

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jennifer Kim whose telephone number is 703-308-2232. The examiner can normally be reached on Monday through Friday 8:30am to 5pm.
